NEW HORMONES FOR STARTING AND TRANSPLANTING SEEDS, BULBS, PLANTS & TREES

ROOTONE

Reg. U. S. Pat. Off.

This is a new hormone plant powder. It is a root-forming stimulant when applied to cuttings, seeds, or bulbs. Being a powder it gets its root-forming activity from the synthetic hormones or growth substances which it contains. It is very easy to use; simply dust on the seeds, bulbs, or cuttings and the most sluggish seeds, like those of perennials, are accelerated in growth and produce healthier root systems. This means healthier plants, more rapid growth, and earlier development. Full directions with each order. $\frac{1}{4}$ -oz pkt 25c. 2-oz jar \$1.00. 1b can \$5.00. Postpaid.

This is vitamin hormone stimulant for plants. It invigorates old roots, multiplies new roots, and reduces wilting and loss on transplants. Transplantone is a water-soluble powder containing Vitamin B-1 and other parts of the vitamin B fractions, plus certain plant hormones which are active in root formation. These chemicals are very vital to the growth of plants, particularly of roots. Plants respond to an extra supply of "growth factors" such as those in Transplantone. Simple to use, full directions with each order. $\frac{1}{2}$ -oz pkg 25c. 3-oz can \$1.00. 1b can \$4.00. Postpaid.

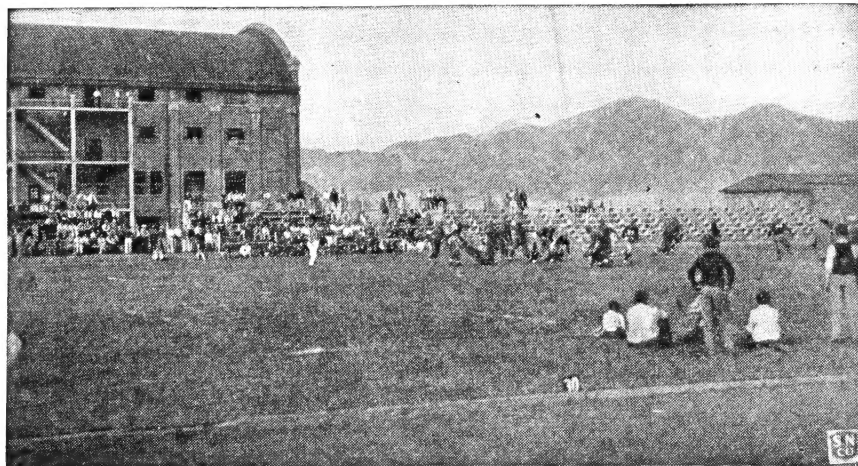

TRANSPLANTONE

Reg. U. S. Pat. Off.

FRUITONE

REG. U. S. PAT. OFF.

FRUITONE is a powder containing several plant hormones. It was first produced for stopping the pre-harvest drop of apples, but it has since been found effective in keeping various kinds of flowers, leaves and other fruits on the tree or plant longer. The effectiveness of these hormones in stopping apple drop was shown by the Bureau of Plant Industry, U. S. Department of Agriculture. The flowers sprayed with Fruitone gives beans, alfalfa, clover, flax, corn, etc., better set of pods especially in bad weather increases crop 30% to 50%. $\frac{2}{5}$ -oz pkg 25c. 2-oz can \$1.00. 12-oz can \$5.00. S. N. & S. Co's. BEANS, Stringless and Tender

Beans Are Indispensable in Every Garden

Beans require a light friable soil with plenty of moisture. In the garden, the soil should be made mellow and rich, and kept so. For garden, a succession of sowing can be made from the first week in May until the middle of June. Sow in rows 18 to 24 inches apart and cover from 1 to 2 inches deep, but not more. Keep the pods picked and the vines well watered and the Beans will continue bearing much longer.

BUSH YELLOW PODDED VARIETIES

THE FOUR BEST YELLOW PODDED BEANS FOR MONTANA AND THE NORTHWEST

Beans — Unrivalled Wax

UNRIVALLED WAX—An extremely prolific heavy yielding and attractive variety. Pods $5\frac{1}{2}$ inches long, fleshy, brittle, stringless, tender, flat, clear Yellow of highest quality. 52 days. **Pkt 10c. $\frac{1}{2}$ lb 25c. 1b 45c. 2 lbs 85c. 5 lbs \$2.00.**

SURE CROP STRINGLESS WAX, also known as **YELLOW BOUNTIFUL**—The pods average 6 to 7 inches long, are very meaty, flat but thick through, and we have never found a stringy specimen. Sure Crop Stringless Wax is very hardy and may therefore be planted several days earlier than the light seeded varieties. 65 days. **Pkt 10c. $\frac{1}{2}$ lb 25c. 1b 45c. 2 lbs 85c. 5 lbs \$2.00.**

BLACK WAX — Pencil Pod—Stringless—Has great clusters of beautiful straight yellow pods six to seven inches long, well rounded, deeply "saddle backed," meaty, and they are brittle, of rich, mild flavor, and entirely stringless. An early sure cropper; of the finest quality. 65 days. **Pkt 10c. $\frac{1}{2}$ lb 25c. 1b 45c. 2 lbs 85c. 5 lbs \$2.00.**

TOPNOTCH GOLDEN WAX—A new improved Golden Wax with pods 5 to 6 inches long, flat and stringless, having very attractive pods this variety is suitable for market or home use and is disease resistant. 50 days. **Pkt 10c. $\frac{1}{2}$ lb 25c. 1b 45c. 2 lbs 85c. 5 lbs \$2.00.**

BEANS—BUSH LIMA

(One Pound Will Plant Fifty Feet of Row)

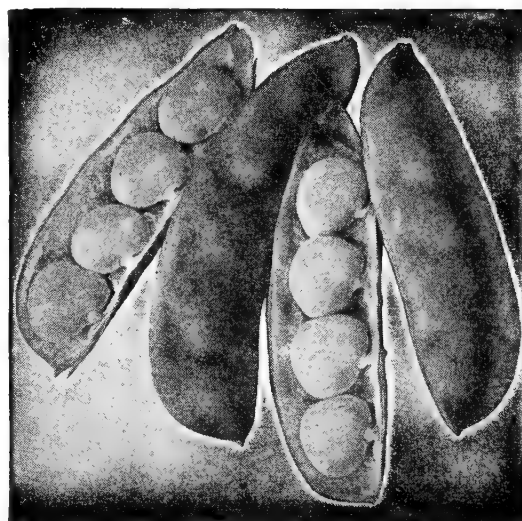

Beans Are Indispensable in Every Garden

Lima Beans are very susceptible to cold and the seed must not be planted until the ground has become thoroughly warm. The end of May is usually safe. Plant the seed edgewise (**eye down**) 6 inches apart in the row and cover two inches deep with fine soil. Sow on well enriched ground.

BURPEE'S BUSH LIMA—Each plant develops into a rounded bush from 2 to 3 feet in diameter and from 18 to 24 inches tall. Pods are uniform in size with an average of five large Beans to a pod. They are thin-skinned and of fine flavor, and immense yielders. The pods are borne in clusters and are easily gathered. 76 days. **Pkt 10c. $\frac{1}{2}$ lb 25c. 1b 45c. 2 lbs 80c. 5 lbs \$1.95.**

HENDERSON'S BUSH LIMA—This variety belongs to the small Limas, known as Carolina or Sieva Lima. On account of their hardness they are valuable in the North, where they will mature early and produce an enormous crop. "SWEET CORN PICKED FRESH IS MIGHTY GOOD"

THE SIX BEST VARIETIES OF SWEET CORN FOR MONTANA AND THE NORTHWEST

Sweet Corn is very sensitive to frost and should not be planted until danger from freezing is past or about the middle of May in Montana. A rich, warm, good ordinary soil will raise excellent Sweet Corn, if it is deeply and thoroughly worked before planting. If planted in rows, make the rows three feet apart and 12 to 16 inches apart in the row; cover one inch deep with fine soil firmly pressed down. If planted in hills, make the hills three feet apart each way, and plant four to six kernels to the hill. When six inches high cut off all the suckers so as to leave three or four plants to the hill; do not let the plants overcrowd. Give frequent and thorough but shallow cultivation until the tassels appear.

($\frac{1}{4}$ -ounce to 100 feet of drill—3 pounds to the acre)

CULTURE—For the earliest Lettuce sow seed of the loose leaved varieties. Sow thinly and when the young seedlings are large enough for the table they may be thinned as used. In this way space is provided for normal growth. For succession sow every two weeks.

The conditions necessary to grow good head lettuce are rich soil, plenty of moisture, and steady growth until the heads are ready to use. A check in growth from lack of nourishment or moisture usually means no heads. Seed may be sown in boxes indoors or in the hot bed and set out as soon as favorable. Do not cover seed more than $\frac{1}{4}$ to $\frac{1}{2}$ inch deep. The plants should be thinned to 10 inches apart in the row, a light application of fertilizer such as nitrate of soda used after the plants have made some growth will be found beneficial. All our varieties of lettuce are excellent for the home garden.

S. N. & S. Co's. TENDER GREEN PEAS

"THEY MELT IN YOUR MOUTH"

(1 pound to 100 feet of drill—80 to 100 pounds to the acre)

Peas are quite hardy and for early crop sow as soon as the ground can be worked. Then sow in succession every two weeks until the first of August. They require moderately rich soil but not excessively rich or wet, or they will run too much to vine and will not bear heavily. The dwarf varieties can be planted in rows 12 to 18 inches apart, and the tall varieties 3 feet apart. The tall varieties should be staked by brush or tied up. By using the various classes of Peas and making several sowings of each, good Peas can be had for a long season. The pods should be kept picked; the plant will then continue to bear longer. For late sowing, use Early Dwarf varieties.

Do You Know this Secret . . .

Do you know how to avoid the usual disappointment of a poor Pea crop after mid-July? It is easy to get a big crop of juicy Peas even up to late August. Instead of planting at 2 or 3 week intervals get the following varieties and plant all at the same time in early Spring. This will allow a good root system to develop before hot weather comes. The varieties will bear in the order shown to late August.

NEW GUINEA BUTTER BEAN

New Guinea Butter Bean

One of the Most Delicious of All Vegetables

The New Guinea Butter Bean is a wonderful vegetable. Grows to enormous size, one fruit often weighing 15 lbs., and from 3 to 5 feet long. In growth it is similar to the squash, and can be grown in the same manner or can be trellised up. It is more productive than squash and much easier to grow. The vines are always free from disease and insect pests, and stand more neglect and abuse than any other vegetable vine we know of. The fruits should be eaten when small, while the fuzzy growth is yet on. It can be cooked like squash and fried like egg plant. When cut up in small pieces and cooked with cream or fried it is most delicious. If trellised up the vines take up so little space, no garden is too small for at least two or three plants. Do not cut Rhubarb; pull it so that it comes out whole from the crown.

A SHORT STORY ABOUT OUR FRUIT TREES

First: They will grow and live longer, stand severe cold and dry climate conditions better than any other Fruit Trees money can buy.

Second: It is made possible to grow trees of such hardiness and stupendous size only by our propagation system. Our one- and two-year-old Trees are larger and better proportioned than any Fruit Trees produced in the Northwest. We have never found a sign of root knot or Crown Gall in our Fruit Trees. We have a typical system of our own in producing these harder high bearing and high vitality Fruit Trees.

W. J. Mills, left, and "Tip" Tippen, our Nursery Superintendent and chief tree and shrub propagator, look over a dormant field run display of our Apple Trees grades. Four trees on right are One-year-olds. We are offering only two-year-old trees this season to build up our stocks. **ALL OUR FRUIT TREES ARE PREPAID.**

Transplantone is a water-soluble powder containing Vitamin B-1 and other parts of the vitamin B fractions, plus certain plant hormones which are active in root formation. These chemicals are very vital to the growth of plants, particularly of roots. Trees respond to an extra supply of "growth factors" such as those in Transplantone. MONTANA

NEW PEACE ROSE (MME. A. MEILLAND)

Plant Patent 591

\$2.50 each plus 25c packing and shipping charges

This new rose is sensational! One marvel is the range of colors through which it passes from opening yellow buds, with edges picoté cerise, to glorious five-inch blooms of firm alabaster white, each petal edged with pink that deepens as the bloom slowly opens, individual petals large and of great substance, very double, shows a great center heart of tawny yellow.

The crowning miracle of this wonder rose is that the plant is as superior as the bloom. The flowers are borne singly on stems so strong and straight with vigorous shining foliage, it needs no disbudding to produce exhibition blooms.
